

# BREATHE EASY

## Second stage and backup systems

### SCUBAPRO Second Stage Swivel

SCUBAPRO's swivel can be easily installed between your existing second stage and LP hose, allowing the second stage to rotate 360 degrees both vertically and horizontally to achieve even 90-degree angles. With an extra-long hose, run your second stage under your arm rather than over your shoulder while maintaining a good angle for the second stage to enter your mouth. More range of motion, less stress on the neck and jaw.

### Seasoft Pony Pocket

Perfect for back-plate systems or BCs that use double tank bands, Seasoft's Pony Pocket features overlapping Velcro webbing that wraps around each tank band to provide solid mounting support for a 13-cubic-foot bottle. Because the pocket mounts to the bands and not the tank, it's easy to change tanks between dives without having to remove the bottle setup. Rugged Cordura construction includes a reinforced back as well as a wide stiffener band at the opening for easier loading.

### Atomic Aquatics Universal Hose Swivel

If you're playing tug-of-war with your second stage during a dive, a universal hose swivel might be the answer. The Comfort Swivel — the ball-joint-style hose swivel that comes standard on many Atomic regulators — is now available in a universal version to fit virtually any regulator second stage that uses a 9/16-inch 18-pitch thread. Since the swivel and LP hose are integrated, the package includes both swivel and 32-inch hose. One end screws into a first stage low-pressure port, the other end onto your second stage. The result: increased range of motion for head turns and tilts, with less teeth clenching and jaw fatigue. We're sold.

### Zeagle Quick Deploy Pony System

This compact system includes a 6-cubic-foot cylinder, RaZor first stage/valve combo with Envoy second stage, heavy-duty mesh pouch with grommets for mounting and a Transfiller to refill right off the tank. A 36-inch-long hose allows you to mount the system inverted and still have enough hose length to pass the second stage to a buddy. Better yet, the whole system can be passed off to your buddy by pulling it out of its quick-deploy pouch. \$427; [zeagle.com](http://zeagle.com)

### Submersible Systems Spare Air 300 w/ Travel Pack

The Spare Air 300 system comes with a 3-cubic-foot bottle, regulator, nylon carry pouch with mounting straps, mouthpiece cover and lanyard, plus a tank fill adapter so you can refill from your tank. Protective caps for bottle and regulator, spare O-rings and silicone grease are all packed in a clear plastic bag so the TSA can easily see its contents. Before traveling, drain the system of air, unscrew the regulator from the tank and install the caps. Pack it in either your carry-on or checked luggage; either way, remember to include the manual to assist the TSA in identifying what it is.

Spare Air System \$299, Travel Pack \$16; [spareair.com](http://spareair.com)
