

Don't go down without it!

The Diver's Reserve Parachute

Sky Divers won't jump without a reserve parachute. Why would you dive without a Spare Air, the smallest redundant scuba system available with enough air to get you to the surface in an out-of-air emergency? When Larry Williamson almost died in a scuba diving accident, his experience inspired the invention of the most popular redundant air supply ever - the Spare Air. Since 1979 we've distributed over 250,000 units worldwide. The Spare Air concept hasn't changed at all in 30 years, because lifesaving air never goes out of style. Spare Air should be a standard piece of scuba diving equipment for the safety minded diver. Our goal is to convince you to save your own life in an out-of-air emergency.

"Spare Air was found to be by far the most favorable method of getting to the surface in this simulated out-of-air emergency."

- an independent study conducted by Penn State University

Product Specifications:

Model	170	300	300 Nitrox
Part Number	170PK	300PK	300PK-N
Product Length	8.75" [22.23 cm]	13.4" [34 cm]	13.4" [34 cm]
Product Diameter	2.25" [5.71 cm]		
Product Weight (full)	1.5 lbs [.685 kg]	2.17 lbs [.985 kg]	2.17 lbs [.985 kg]
Pressure Rating	3000 PSI [200 BAR]		
Max Capacity	1.7 cu ft [48 l]	3.0 cu ft [85 l]	3.0 cu ft [85 l]
Cylinder Material	Aluminum - Black Anodized Aluminum		
Pressure Relief	Integrated in Regulator		
Regulator Type	Balanced Single Stage		
Operational Temp.	-22°F [-30°C] to +158°F [+70°C]		
Air Supply	30 breaths	57 breaths	57 breaths
	Approximate, at surface. Based on 1.6 liter breath size		

Available Options:

- 1.7 or 3.0 cu ft standard air cylinder - 170PK/300PK
- 3.0 cu ft Nitrox Cylinder - 300PK-N
- Dial Gauge - 003DGS
